CALF FEEDING SOLUTIONS

Custom made for your farming needs!

How it works

- 1.) Pasteurized waste milk pumps into the tank from your pasteurizer
- 2.) Select which feed amount you want to use, there are 4 different settings
- 3.) Then push the dispense button on the feed handle to dispense that amount to feed your calves
- 4.) When finished the tank can be hooked back up to your pasteurizer to wash, just push the wash button on the tank control box
- 5.) There is a spray ball inside of the tank so it can wash with the pasteurizer
