Raise healthier calves by recycling waste milk with a Calf-Star Milk Pasteurizer

Why should you buy a Calf-Star Calf Milk Pasteurizer?

You will see money savings and a return on your investment the very first day you use your Calf-Star Pasteurizer.

- Recycles waste milk and completely eliminates milk replacer costs resulting in reduced feed costs.
- Low maintenance.
- Healthier Calves prevent the spread of disease along with a lower mortality rate lowering veterinary expenses.
- Custom engineering gives you the highest quality for the lowest cost.

Features:

- Fully-automated CIP (clean-in-place) wash system.
- Efficient pasteurization using HTST (high temperature, short time).
- Captures heat from outgoing milk and reclaims it to incoming milk in the heavy-duty re-gen section.
- Accurate Timing Pump for the best Log Kill of bacteria.
- Timing pump is engineered to put a positive pressure on pasteurized milk to prevent cross-contamination.
- Peristaltic injection pumps for accurate dispensing of chemicals.
- PLC controlled for reliability and ease of operation.
- All stainless steel commercial grade construction for easy cleaning and durability.
- Digital touch screens feature incoming milk temperature, pasteurization cycles, outgoing milk and flow rates along with cycle durations. Tank selections are made on the touch screen.
- The wash screen allows for setting specific amounts of acid and detergent to be used for each tank/cycle. It can also specify which tanks to be washed. Acid and detergent levels in the source barrels are also monitored. The pasteurizer can wash up to four other tanks besides itself.
